

CUSTOM FACILITY SOLUTIONS

*Discover possibilities
for your facility with
80/20 custom T-slot
aluminum solutions*

Designed for Custom Solutions

80/20 Inc. provides a unique building system, consisting of T-slot aluminum profiles and accompanying fasteners, accessories, and parts to configure custom facility applications. This system is an alternative option to typical welded steel, but without the associated high fabrication and skilled labor costs inherent in steel projects.

T-slot Aluminum is the Answer

Aluminum is comparable in strength to steel while providing long-lasting, vibration-resistant connections. It is non-magnetic and can stand up to most harsh chemicals—aluminum doesn't oxidize. It's also easy to assemble and provides a large degree of flexibility. T-slot aluminum solutions are completely custom to fit your specific requirements.

100%
Customized
to Your Needs

When you partner with 80/20, you work with the industry leader in T-slot profiles and parts. 80/20 has been supporting the market for over 30 years with the largest product offering in the business. We listen to your needs and provide products and services that support your changing processes.

BREAK TIME

CREATE CULTURE IN SHARED SPACES

When it comes to facility layout and design, you don't have to choose utility or aesthetics—you can have both with 80/20. When planning for requirements within a defined space and your aspirations for its visual aspects, cost-effectiveness is key. The modular nature of 80/20 products allows for easy modification and expansion, reducing the overall investment in your facility while maximizing profits.

A breakroom is more than a water cooler and a coffee station. It is the hub of culture that unites multiple departments, creating networks across an entire facility. The kitchen or café area is a wellness space. It can be used for collaboration, but also for relaxation and relationship-building. Smooth-faced profiles create easy-to-clean support structures for countertops, seating, storage, and tables.

Amount of employees that say access to a workplace kitchen increases their productivity.

57%

OFFICE SPACE & PROJECT MANAGEMENT

Whether you design your facility offices to have quiet or collaborative workspaces, standard desks and other one-size-fits-all furnishings can erode your facility budget in unexpected ways. Standard off-the-shelf applications rarely fit anybody or process safely and often result in lost productivity due to work-related musculoskeletal disorders.

By customizing office solutions with 80/20, your staff will maintain a neutral posture and reduce injuries from prolonged sitting or standing. The unique T-slot design allows for precise ergonomic positioning of your work surfaces and accessories. The height, length, width, and color are all completely customizable. Black or clear anodized aluminum framing is durable, reconfigurable, and creates a sleek modern look in the workplace.

Scratch-resistant panels can either rest inside the T-slot groove to create effective barriers or be mounted flush with the T-slot profile for common tabletop and shelving surfaces.

PROJECTS IN MOTION

Mobility is key for fast turnaround in project management spaces. Multi-use rooms require multi-use applications. Folding tables, workbenches, cabinets, and partitions made with 80/20 are mobile and height-adjustable.

DESIGN IN EVERY **DIRECTION**

Don't settle for the space you have. The modularity of 80/20 T-slot aluminum framing system allows you to design for the future. Expand vertically and reconfigure to maximize the floor space you have.

WORKFLOW EFFICIENCIES

80/20 products support ongoing workflow improvement initiatives, such as lean, 5S, QRM, and others. Applications designed with 80/20 are flexible and customizable for changing product-based and process-based layouts. Whether you require a facility layout centered on process or product or need a fixed-position or cellular layout, modular carts, shelving, racks, and more give you adequate space for materials handling, storage, and inventory.

80%

40-80% operating costs center on material handling.

Heavy-duty applications are designed primarily with safety and maintenance in mind. The 80/20 T-slot profile has channels that allow you to mount components directly to your structures. This provides infinite positioning. With these integrations, you have an adaptable design that enables quick changeover and increased productivity. Include doors and entry points strategically for repairs and maintenance as well as adjustments. When you need to add, change, or remove components, it's simple and straightforward.

Operation, maintenance, and repair are 60-80% of a building's life-cycle costs.

Ready to Try It Out?

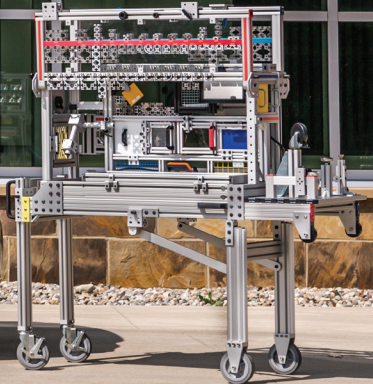

The 80/20 distribution network can design and implement your next facility solution.

Request a demo van visit and your local 80/20 distributor will come right to your door so that you can see and interact with profiles and accessories. The van transports a gurney with samples of aluminum profiles, fasteners, panels, and more so that you can start creating your custom solution.
